

MOHIT KURHADE

AI/ML ENGINEER | GENERATIVE AI DEVELOPER

Pune, Maharashtra, India | +91 95617 65337 | mohitkurhade21@gmail.com
linkedin.com/in/mohit-kurhade-7b283a292 | github.com/goat-89

PROFESSIONAL SUMMARY

Final-year Computer Engineering student specializing in machine learning, generative AI, and LLM application development. Hands-on experience building a Gemini-powered REST API with FastAPI, a real-time OpenCV face-detection system, and secure full-stack ML-adjacent platforms. Skilled in Python, prompt engineering, LLM API integration, model inference, computer vision, and Docker. Seeking entry-level AI/ML Engineer or GenAI Engineer roles to build and deploy intelligent, production-ready systems.

TECHNICAL SKILLS

AI/ML and GenAI: Machine Learning, Generative AI, Large Language Models (LLMs), LLM API Integration, Google Gemini API, Prompt Engineering, Model Inference, Model Evaluation, Computer Vision, OpenCV, Data Preprocessing, NumPy, Pandas

Programming: Python, Java, SQL, JavaScript

Frameworks and APIs: FastAPI, Pydantic, REST API Design, Spring Boot, WebSocket, JSON, CORS

Data and Cloud: PostgreSQL, Supabase, SQL, Cloud Computing, Edge Functions

Tools: Git, GitHub, Docker, Postman, Automated Testing, Linux, OOP, Data Structures and Algorithms

PROJECTS

Mini Gemini — Generative AI REST API | *Python, FastAPI, Google Gemini 2.5 Flash, Pydantic, REST API* | [GitHub](#)

- Engineered a production-style FastAPI microservice exposing a POST /generate endpoint that validates user prompts and returns LLM-generated responses via the Google Gemini API with clean JSON output and sub-second average latency.
- Implemented Pydantic request/response schemas, CORS middleware, and environment-based API-key management, reducing malformed-request errors to zero through strict input validation.
- Designed modular inference integration and prompt-engineering patterns (system prompts, temperature control, output constraints) enabling reusable LLM API workflows.

Face Detection System — Computer Vision Application | *Python, OpenCV, NumPy, Image Processing*

- Built a real-time computer-vision pipeline using OpenCV Haar cascade classifiers to detect and localize human faces in images and live video streams, rendering bounding-box visualizations at 25+ FPS on CPU.
- Applied grayscale conversion, histogram equalization, and frame preprocessing to improve detection robustness, validating accuracy across 100+ test images spanning varied lighting, angles, and backgrounds.

InternNext Pro — Internship and Recruitment Platform | *React, Vite, Supabase, PostgreSQL, Tailwind CSS* | [GitHub](#)

- Developed a full-stack recruitment platform supporting 3 user roles (students, employers, admins) across 10+ workflows: opportunity listings, applications, candidate shortlisting, search, filters, and notifications.
- Secured the platform with Supabase Auth, PostgreSQL Row Level Security policies, Edge Functions, and server-side Razorpay payment verification; added form validation and automated tests to catch regressions pre-deploy.

CrisisMesh — Resilient Emergency Communication Platform | *Java, Spring Boot, REST APIs, WebSocket, SQL, Docker*

- Architected incident, alert, responder-coordination, and role-based channel workflows with real-time status updates over WebSocket, designed for unreliable network conditions.
- Implemented offline message queuing, retry handling with exponential backoff, and delivery tracking, improving message delivery reliability; containerized services with Docker for consistent deployment.

INTERNSHIP EXPERIENCE

CodSoft — Java Developer Intern | Nov 2025 – Dec 2025

- Developed 5+ Java console applications applying OOP principles, reusable class design, input validation, and exception-aware logic; tested boundary cases and debugged runtime behavior to ensure correct outputs.

Cognifyz Technologies — Web Developer Intern | Mar 2025 – Apr 2025

- Built responsive HTML, CSS, and JavaScript interfaces with interactive components and reusable styling; debugged rendering issues across multiple devices and browsers to ensure consistent UX.

EDUCATION

Bachelor of Engineering (B.E.), Computer Engineering | 2027

Savitribai Phule Pune University — Indira College of Engineering and Management, Pune, Maharashtra

Relevant Coursework: Artificial Intelligence, Machine Learning, Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, Cloud Computing

CERTIFICATIONS

- Alpha (DSA with Java) — Apna College
- Get Started with API Gateway — Google Cloud Skill Badge
- Spectrum of AI
- Learn Ethical Hacking From Scratch — Udemy (15 hours)
